

ASSIGNMENT 4

Due February 25, 2003

Homework 4

Do computer problems 5.3 and 5.4 on p. 250 of our textbook. Use the appropriate functions provided on by website and compare with the results obtained by using Matlab's own rooting finding routine. You need to provide answers to the questions posted in the problems, and justify as much as you can any conclusions that you make. Do not show me any of the programs that I have on the website, instead show me how you use them within Matlab.
